The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Kuyper '952 Patent in view of WO 00/74843.

Kuyper prepares polycarbonate from an epoxide, carbon dioxide and active hydrogen compound in the presence of a double metal cyanide catalyst (col. 1 lines 45-47; col. 3 line 25). More than one epoxy can be used either simultaneously or in consecutive steps (col. 4 lines 24-26). The reaction is conducted at 40-200⁰ and 2-40 bar (col. 1 lines 48-49).

Kuyper does not describe the particular double metal cyanide catalyst of applicant's claims, but does state any double metal cyanide type compound can be used (col. 2 line 12).

WO 00/74843 discloses the metal cyanide catalyst claimed by applicant. This catalyst has high activity for polymerizing epoxides and therefore, less catalyst is needed. It would have been obvious to use this superior catalyst in Kuyper's process for the expected advantages.

US 2002/0006864 is apparently the equivalent to WO 00/74843.
